

The DuraSeal™

4-Way Diverter Valve

The DuraSeal™ 4-Way Diverter Valve

The DuraSeal™ 4-Way Diverter Valve is a mechanically seated, non-lubricated expanding plug style valve that provides a provable bubble tight seal while diverting product flow direction. At Franklin, we understand the criticality of product isolation during measurement and multi-product storage, and in response, have designed our diverter valve with proven performance and quality features that allow for consistent performance even in the most demanding service conditions. You can always rely on Franklin's commitment to manufacture, deliver and service the valves that meet your challenging requirements.

The DuraSeal™ 4-Way meets the following product requirements:

- ASTM B16.34
- ASME B16.5
- PED/CE by request
- PESR/UKCA by request
- CRN (Canada) certified
- Designed, assembled and tested in an ISO 9001 certified/API Q1 compliant facility

Company History

Since 2005, Franklin Valve has been on a mission to supply the oil & gas industry with a quality product, while also leading the industry in customer service and delivery. In 2014 we moved into our current facility, allowing us to better leverage our large inventory and lean manufacturing practices while expanding on our Engineering and R&D capabilities, all with the goal of better serving customer needs.

As we've grown, our **Value Proposition** has remained the same: Franklin Valve offers the highest value on product quality and customer service while leveraging our large inventories to meet and exceed customer lead times. Franklin Valve is globally distributed, represented and approved with high profile end users and Original Equipment Manufacturers.

How the DuraSeal™ 4-Way Diverter Valve Works

Operation

The Franklin DuraSeal™ 4-Way Diverter Valve is a resilient seated, non-lubricated plug type valve which utilizes a mechanical action to perform diverting functions.

When diverting the flow, turn or actuate the operator clockwise or counterclockwise dependent on desired flow path, the plug will raise, retracting the seating slips through their tapered dovetail connections.

Once the seals are fully retracted, the plug and slips perform a 90° rotation, free of any seal surface abrasion.

Upon completing the 90° rotation, the plug is driven down between the tapered surfaces of the slips, causing expansion of the seals into the sealing surface for a positive seal.

Once seated the pressure gauge will indicate reduced pressure, proving the seal.

SEATED IN L/R OPEN – CW POSITION

NEUTRAL FULLY UNSEATED – MID TRAVEL

SEATED R/L CLOSE – CCW POSITION

Features and Benefits

In-line Maintenance

The Franklin DuraSeal™ 4-Way Diverter Valve offers in-line maintenance to reduce operating costs and downtime. Slips are designed to be mounted to dovetail connections on the Plug allowing for removal from either the top or bottom of the valve without removing the valve from the line and without influencing the Actuator. This will allow for the 4-Way Diverter Valve to be installed upside down for easier access to the actuator and slips.

Reliable Double Protection Mechanical Seal

The Franklin DuraSeal™ 4-Way Diverter Valve uses a pressure gauge DTR System to prove positive sealing for metering accuracy. During rotation of the plug there is no abrasion or wear between the sealing surfaces. The mechanical retraction and compression ensure a no leak stream separation and a longer seal life. Seals are made of highly resilient elastomers that are bonded to the Slips. The DuraSeal™ 4-Way Diverter Valve does not require sealant under any circumstances to seal.

Fast Low Torque Operation

Manual and motorized operation can be possible with the use of an electric actuator. With lower cycling torques, smaller and less expensive actuators can be used.

Quality Manufacturing

The Franklin 4-Way Diverter Valve is designed, inspected, assembled and tested in Houston, TX in an ISO 9001 certified and API Q1 compliant facility.

Applications

- Bi-Directional Meter Prover
- Multi-Product Manifolds
- Metering Systems
- Custody Transfer Units
- Terminals
- Tank Farms (Oil Depots)
- Aviation Fueling Systems
- Fuel Loading Systems
- Hydrocarbon Services

DuraSeal™ 4-Way Diverter Valve Internal View

Easily automated with choice of electric actuators. DuraSeal™ 4-Way Diverter Valve is available in wide range of elastomer materials.

Applications

With bubble-tight, sealing the DuraSeal™ 4-Way is an excellent choice for meter proving applications where accuracy is necessary.

Franklin Valve reserves the right to change trim codes w/o prior notification

Proper seal selection requires a number of considerations such as media, pressure class, differential pressure, low temperature, high temperature, seal type, etc. To that end we have included a selection of slip seal materials and a brief list of considerations:

Fluoro Elastomers Slip Seal Materials (FKM)		
FR	Fiber Reinforced	Optional HIDP, can be added to all Elastomer options upon request.
VGF	Viton* GF	Viton* with Enhanced Chem. Resistance, Our Standard Material
VGF9	Viton* 90 Durometer GF	HIDP Viton* GF
VGFLT	Viton* GFLT	Low Temp Viton* GF
VGFLT9	Viton* 90 Durometer GFLT	HIDP Low Temp Viton* GF
VE	Viton* ETP (Extreme)	Viton* with Chem. Resistance rivaling FFKM
VE9	Viton* 90 Durometer ETP	HIDP Viton* with Chem. Resistance rivaling FFKM
Perfluoro Elastomers Slip Seal Materials (FFKM)		
KRZ	Kalrez*	Kalrez* with High Chem. Resistance
KRZ9	Kalrez* 90 Durometer	HIDP Kalrez*

All specifications and materials are subject to change without notice. Alternate seal materials may be provided upon request.

*Generic equivalents provided.

Preferred Mounting Position

1.0 SCOPE OF INSTRUCTION

- 1.1. This information is provided for support of the DuraSeal™ 4-Way Diverter Valve in maintaining the maximum life and function of the valve.
- 1.2. The contained information is subject to change without notice.
- 1.3. This document provides information for typical installations. In the event of unique situations, please contact your representative or the factory.

2.0 DEFINITIONS

- 2.1. **DTR** - Differential Thermal Relief, provides the cavity relief functions of API 6D.

3.0 CONSIDERATIONS

- 3.1. Positioning of valve to provide operational access in installation. This is of particular concern for manually operated valves in pipe racks.
- 3.2. Positioning of the DTR to provide proper function. The conduit in which the DTR terminals should be installed to the inlet pipe of the prover.
- 3.3. Positioning of bleeds and drains to provide adequate operation. On valves which require complete draining, ensure that drains are positioned to provide complete draining.
- 3.4. Positioning for reducing damage due to solids contained in fluids. With solids in the fluids, it is preferable to have regular draining of the body cavity to reduce accumulation and reduction of performance. It is also preferable to have the DTR to the upper side so that solids do not damage the DTR checks or valves.

4.0 PREFERRED MOUNTING POSITIONS

- 4.1. Positioning of the stem facing up in the vertical position is preferable, in all instances.
- 4.2. 400 Series: 12" or smaller 150 & 300 class and 10" or smaller 600 class may be oriented with a horizontal stem position.

STANDARD DIFFERENTIAL THERMAL RELIEF (DTR)

BODY BLEED VALVE is only for the purposes of manually venting the body cavity. When not being used for bleeding, the body bleed valve should be closed and the outlet should be plugged.

UPSTREAM ISOLATION VALVE must be left open for cavity relief to function. It should only be closed for maintenance and leakage management in the event of damage. This flange should be installed as the Inlet or outlet flange.

PRESSURE GAUGE is used to identify seal integrity in service. During seating, the expanding slips create an increase in volume between seals, causing a drop in valve cavity pressure with respect to line pressure. Leakage past slip seals will increase this cavity pressure back to line pressure.

IN-LINE CHECK VALVE ensures trapped cavity fluid does not exceed line pressure due to thermal expansion.

Directionality Characteristics of Valve Are Shown Below
